

## IC Card Hotel Lock IT5600

### Description:

The lock is made have pure-copper or stainless steel and is very durable.

Use Siemens encryption techniques, which is counterfeit preventing.

Door-unlock-warning: this can warn the user and ensure 100% security.

Can register 255 exclusive user cards and support offline network function.

Can work with Li battery, charged by a charger, no need to change battery.

IC card can realize the independent locking for hotel or household.

### Parameters:

|                       |                             |
|-----------------------|-----------------------------|
| Size                  | : 243mmx78mmx19mm           |
| Weight                | : 3kg                       |
| Color                 | : Copper or stainless steel |
| Working temperature   | : -20°C ~ +80°C             |
| Working humidity      | : 10% ~ 90% RH              |
| Card Type             | : SLE4442                   |
| Speed of Reading Card | : < 0.3s                    |
| Record Number         | : 900                       |
| User Card Number      | : 255                       |
| Input Voltage         | : 6V                        |
| Input Current         | : 200mA                     |
| Dynamic Current       | : < 150mA                   |
| Static Current        | : < 0.005mA                 |
| Communication         | : RS485                     |
| Affix                 | : Card coding system        |

## Power Saver (IC Type) PS02

### Description:

1. Simple operation.
2. Accept IC cards only.
3. It has time-lapse function.
4. With PC cover outside, strong and durable.

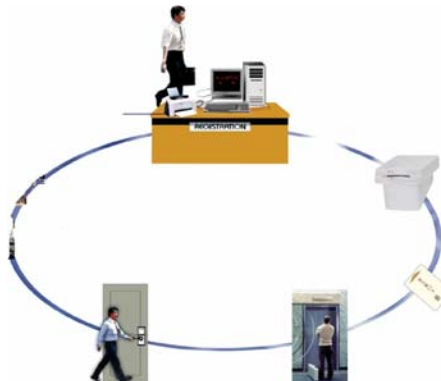

| Electric Parameter |         |
|--------------------|---------|
| Input Voltage      | : 220V  |
| Output Voltage     | : 220V  |
| Output Current     | : 30A   |
| Power              | : 7200W |

## Hotel Management Software

**HTICHS:** Through read-write the IC card, you can set the lock depending on your need, including the set of the lock' s address, clock. The system can set the guests of every room, issue guest card for the guests entering appointed room, it can also forbid some guest can' t enter certain room, or confirm anyone enter certain room. Further more, it can make floor card to allow the dustmen to clear all the rooms of appointed floor, and you can make emergency card to enter any lock, including locked inside, in urgency.

### Function List:

1. System Parameter Setting
2. Database Setting
3. Com Setting
4. Purview Group Setting
5. User Setting
6. Room Type Setting
7. Room Setting
8. Card Setting
9. Check Card

10. Issue Address Card
11. Check-In
12. Check-Out
13. Make Forbidden Card
14. Make Resuming Card
15. Upload Data
16. Query Entry Record
17. Query Room
18. Chang Password

## IC Card Encoder CR-01

### Use Way:

First of all you must turn off the computer, insert the keyboard wire into the keyboard-joint behind card reader after pulling out the wire from the keyboard.  
Then insert keyboard-end which behind the card reader into the joint on keyboard.  
Finally connect the reader's COM wire to the COM port on the computer.  
(Note: Connect the Card Reader must after drive installation)  
Indication Light: Two indication lights, the red light turns on when connect the power.  
The green light turns on when you insert the card to the reader.  
It will flash when it is communicating.
